

Design and production of vacuum systems

Type AM **Partial recovery systems**

Heavy duty two stage liquid ring vacuum pumps with partial recirculation system. Competitive solution of high quality construction.

Type AC **Total recovery systems**

Vacuum systems with total recovery of the sealing fluid through a heat exchanger. Construction in various materials including austenitic stainless steel. Applications in the general industry. Single packages or centralized vacuum systems with more pumps running in parallel.

Type ACV Total recovery systems for the chemical and pharmaceutical industry

Vacuum systems with pre and post condensers and solvent recovery system.

Type OCS Oil sealed vacuum units

Vacuum units conceived for heavy duty applications with built in automatic condensate discharge system.

Special systems

Special multistage vacuum units and systems designed for low ultimate pressures. Systems with gas ejectors, mechanical boosters and dry screw pumps. Systems for solvent recovery.

Vacuum systems with pre and post condensers and solvent recovery system.

Type OCS Oil sealed vacuum units

Vacuum units conceived for heavy duty applications with built in automatic condensate discharge system.
